Profile

Focused on applying AI and automation to real-world technical challenges. Experienced across the full project lifecycle, from building agentic pipelines and deploying production systems to collaborating on innovation strategy with enterprise clients. Thrives in hybrid roles where engineering rigour and AI capabilities come together to solve problems that matter.

Experience

Letsinnovate

Madrid, Spain

AI/ML Engineer

Oct 2025 – Present

- Joined as the first hire of an early-stage AI innovation consultancy, taking an entrepreneurial role across both technical delivery and innovation strategy for enterprise clients including Ferrovial, Acciona, and Moeve, translating business needs into production-ready AI solutions.
- Built a Chinese social media trend radar by integrating scraping pipelines, LLM-based analysis, and automated reporting, enabling clients to monitor emerging market signals with no manual effort.
- Developed a multi-agent strategic document generator using LangGraph and LangChain, orchestrating specialized AI agents to autonomously research, structure, and draft reports, reducing document creation time by over 95%.
- Deployed production-ready AI solutions end-to-end: containerized services with Docker, automated workflows with n8n, and maintained reliability through CI/CD pipelines on client servers.

Robert Bosch AG, BDO

Linz, Austria

AI & Data Engineer Intern

Mar 2025 – Sep 2025

- Developed a private-document RAG pipeline using LangChain, OpenAI APIs, and Deepeval, reducing manual document search time by 40% and improving information retrieval efficiency.
- Built AI Agents to generate dashboards from natural language queries, removing the need for manual dashboard creation per client request and accelerating data-driven decisions.
- Built data pipelines in Azure Databricks to process high-frequency machine telemetry (50 parameters/sec per unit) from industrial plants across Europe, bridging the development team and on-site engineers to align data outputs with real production needs.

Institute for Research in Technology, IIT-ICAI

Madrid, Spain

Research Fellow (Grant)

Jun 2024 – Sep 2024

- Fine-tuned open-source LLMs (Llama3, Gemma) for confidential document Q&A and synthetic data generation, building privacy-focused solutions to accelerate organizational AI adoption.

Education

Comillas Pontifical University, ICAI

Madrid, Spain

M.Sc. in Industrial Engineering + Smart Industry

Sep 2023 - Jun 2025

Thesis [10/10]: Patent-pending computer vision system for real-time multi-source object detection and tracking.

Hochschule Esslingen - Exchange Program in Engineering - Stuttgart, Germany

Sep 2022 – Jun 2023

University of Saragossa

Saragossa, Spain

B.Sc. in Electronic and Automatic Engineering

Sep 2019 – Jun 2023

Thesis [9/10]: Automated sorting plant for warehouse operations, control logic in TIA Portal V17, validated in Factory I/O.

Skills, Projects & Activities

Technical: Industrial engineering background (automation, control systems, electronics) applied to end-to-end AI/ML development, from model fine-tuning and agentic pipelines to production deployment.

Open-Source: [License Plate Detection System](#), real-time detection and OCR pipeline (Python, OpenCV, YOLO). [Personal AI portfolio](#) built as an interactive chatbot.

Hackathons: Valor Hackathon 2024 (AI logistics optimization), [Repsol Hackathon 2023](#) (energy data solution).

Language: Spanish (Native), English (Proficient), German (Basic).

Leadership & Activities: Competitive basketball player for 17 years, 3 of which at elite level in Spanish Youth Leagues.
