

IVÁN JÚDEZ RÁFALES

Saragossa, Spain • ijudezrafales@gmail.com • <https://ivan-portfolio-ten.vercel.app> • www.linkedin.com/in/ivanjudez

Profile

Focused on driving AI adoption and digital transformation through data-driven engineering solutions. Committed to leveraging AI to improve efficiency, decision-making, and innovation in real-world applications. Combining technical expertise with an industrial engineering background to deliver solutions that create sustainable business impact.

Experience

Robert Bosch AG

Linz, Austria

AI & Data Engineer Intern

Mar 2025 – Sep 2025

- Developed a private-document RAG pipeline using LangChain, OpenAI APIs, and Deepeval, reducing manual document search time by 40% and improving information retrieval efficiency.
- Built AI Agents to generate dashboards from natural language queries, eliminating the need to create new dashboards for each client request and accelerating data-driven decisions.
- Built and optimized scalable data pipelines in Azure Databricks, collaborating with cross-functional teams in Austria and Germany to standardize solutions for global deployment.

Technological Research Institute

Madrid, Spain

Research Fellow (Grant)

Jun 2024 – Sep 2024

- Developed privacy-focused AI solutions by fine-tuning LLMs (Llama3, Gemma) for confidential document Q&A and generating synthetic datasets with Mixtral 8x7B and Qwen, delivering more reliable, secure, and scalable models that strengthened organizational trust in AI adoption.

Education

Comillas Pontifical University, ICAI

Madrid, Spain

M.Sc. in Industrial Engineering + Smart Industry

Sep 2023 - Jun 2025

Thesis: Awarded highest grade [10/10] – Developed a patent-pending computer vision system under NDA. Delivered a functional prototype application capable of real-time multi-source object detection and tracking using YOLO, OpenCV, and OCR, demonstrating high accuracy and potential for deployment in advanced AI solutions.

Hochschule Esslingen

Stuttgart, Germany

Exchange Program in Engineering

Sep 2022 – Jun 2023

University of Saragossa

Saragossa, Spain

B.Sc. in Electronic and Automatic Engineering

Sep 2019 – Jun 2023

Thesis: Awarded grade [9/10] – Designed a fully functional automated sorting plant dedicated to warehouse operations. The system received parcels, classified them by size, and stored them until requested, replicating real logistics workflows. Developed all control logic in TIA Portal V17 and validated full process functionality through simulation in Factory I/O.

Skills & Interests

Technical: Advanced proficiency in Python for AI/ML, experience with cloud environments (Azure Databricks), API integration, and CI/CD workflows

Language: Spanish (Native), English (Proficient), German (Basic)

Interests: International experiences, endurance sports, and exploration of new cultures and ideas.
